The Science of Laboratory Construction

HLF Agility

Integrated, quality casework that's quick to install, easy to change, and an investment that you can take with you.

HLF Agility is the ideal choice if you want the lab you build today to still be the perfect lab tomorrow. Because it's modular, you have a wide range of options: cabinet materials, underhung installation, floor mounted with nylon glide casters for easier mobility, and more. It's fully integrated, within the line and with other Hanson products, so you can expand as needed.

In fact, you can change it, move it, or even take it with you. This flexibility and value make it a smart investment whether you're building a complete laboratory or starting with a single wall of casework.

Underhung cabinets with standard casters

HLF Agility delivers all this:

- Hanson's leading-edge combination of quality, quick installation, and affordability.
- Available in a choice of stationary benches with nylon leveling supports or mobile benches with casters.
- Fully integrated with Hanson's complete line of fixed cabinets, tables, fume hoods, fixtures, chem-resistant work surfaces, overhead service carriers, and accessories.
- Includes standard casework, special-use cabinets, shelving, and tables.
- Available in 10 standard colors, two-tone combinations, and custom colors.
- Recyclable steel frame holds cabinets in your choice of materials: steel, wood, or laminate. Hanson's fit and finish hold up to any science, from Life Sciences to alternative fuel technology.
- Quality construction details like vertically-welded supports provide greater load-bearing capacity, keep door and drawer alignment true for the life of the cabinet, and assure years of peak performance.

Nylon glide casters
